- OFFICIAL BODY LETTER DESIGNATION BY COMMONLY USED BODY NAME
- BRAND NAME UNDERLINED INDICATES REGISTERED SALES BRAND
- * (MODEL) FIRST USE OF A MODEL NAME DURING A BODY RUN
- FWV FRONT WHEEL DRIVE IF ALL WHEEL DRIVE

The cowl assembly is the "heart" of an automobile body. Its design establishes important visual parameters like the windshield position and shape, body width and belt height. It also has built-in functional components like front body structure, door hinging, air handling, wiper geometry and pedal pivots. For this reason the cowl is usually the common element of a "Body Family", having variations fore and aft and often used on multiple brands, models and body styles for several years running.
